Update -

The EPA St. Louis generator and fuel can were returned to EPA Fenton warehouse this morning as planned.

The housing unit at monitoring station 2 Pattonville FPD Admin (Earth City) with the hardware issue was repaired today. One of the AreaRAEs there was indicating a pump failure message. I reset it and the Viper Linc unit and all should be ok since last checked this evening.

All units are now padlocked and pinned to the ground with 24-inch rebar pins in case of predicted severe storms Sunday through Tuesday.

The unit at station 3 Pattonville FPD McKelvey still has a Viper Linc unit without a power source cord to be corrected next week. Battery apparently went dead so it was not functioning today.

One of the Viper Linc units at station 4 Spanish Village Park was dead and I could not turn it back on despite being connected to power source.

Will resume duties on Monday.
